How do you host translated content with a Django Application?

bod@pml.ac.uk

django-modeltranslation

Implementation

- Install it:
 - o pip install django-modeltranslation CLI
- Add it to your install applications:
 - o INSTALLED_APPS = [..., modeltranslation, ...] settings.py
- Configure the languages of interest:
 - o LANGUAGES = [..., ('bg', 'Bulgarian'), ...] settings.py
 - o MODELTRANSLATION DEFAULT LANGUAGE = 'en'
- Register your models:
 - o from modeltranslation.translator import register, TranslationOptions
 - o @register(single slide)
 - o class single slide options(TranslationOptions):
 - o Fields('title', 'text, 'image_image')
- Run migrations:
 - o python manage.py makemigrations CLI
 - o Python manage.py migrate

```
single_slide

title
text
image_path
```

single_slide

title_en
text_en
image_path_en
title_bg
text_bg
image_path_bg

Why is plastic pollution such a problem?

Large pieces of plastic can

trap and injure animals.

Why is plastic pollution such a problem? Plastic is a serious and long-lasting problem because it doesn't break down easily. It can last for hundreds of years, polluting our oceans and land. As plastic breaks into smaller pieces, it spreads throughout the water and settles on the ocean floor, harming marine life and ecosystems. Here are some examples of why it is a problem: Animals get entangled Mistaken for food Microplastics Ecosystem damage Large pieces of plastic can trap and injure animals. Sea creatures often mistake plastic for food, leading to illness or death. Tiny plastic pieces can harm the smallest ocean organisms, such as plankton. Plastic can introduce harmful species to new areas and damage sensitive habitats like coral reefs.
